Git-Bash vs Git-GUI

Antes de esta práctica llevaba usando un par de meses ya el Git-GUI, lo que implica que mi opinión seguramente esté condicionada, pero he de decir que repetir todo este proceso con el GUI ha sido muchísimo más rápido y sencillo.

A la hora de los update, nunca me ha hecho falta hacer uno porque el GUI me lo indicaba automáticamente. Los logs son mucho más bonitos y estructurados, son lo que el *git log --pretty* intenta ser. Te escanea si algo está desactualizado con tan sólo presionar un botón en vez de reescribir todo el comando otra vez porque se te escapó una “ç” al pulsar Enter (me ha pasado más veces de las que me gustaría admitir), y el Commit y Push igual e incluso puedes desconectarte, algo que no sabía que se podía hacer.

También es mucho mas apetecible para aquellos que la consola los intimida o simplemente quieren un programa que les permita sincronizar su trabajo con sus compañeros sin tener que armar mucho lío ni acordarse de los comandos, ya que he tenido que reempezar la práctica más de una vez porque hice comandos en orden diferente desde el Git-Bash cuando en Git-GUI te avisa de lo que estás haciendo.

En conclusión, me parece mucho más sencillo e intuitivo el Git-GUI, y seguramente haya más programas del estilo que son mucho más bonitos y apetecibles para aquellos que, como yo, tienen memoria de pez y siempre se les escapa alguna letra al escribir comandos.
